

PROFESSIONAL TURF FERTILIZER

POP-UP

16 - 30 - 5

N total	
12% Ammoniacal nitrogen + 4% Controlled release nitrogen	16%
P₂O₅	30%
K₂O	5%
MgO	3%
SO₃	4,5%

Root booster

A ternary fertilizer studied appositely for satisfying the specific requirements during the seeding and post-seeding phases, both on uncover ground or turf overseeding.

We have added a fraction of "slow-release" nitrogen to a material with high values of phosphorus, an element notoriously contributing to the rooting process: the aim is to guarantee a gradual nutritional support to the plant which will be born, by uniting the rooting and growth in only one distributive step: the potassium and ammoniacal nitrogen ensure a balanced fertilizer unique in its kind, extending its efficiency even towards turf overseeding, enabling them to endure the physical stress caused by the mechanical operations, sometimes invasive. An "eclectic fertilizer", studied especially for every type of seeding.

+ *It helps in rooting phases*

+ *Balanced Nitrogen*

+ *For all kind of seeding*
