

PROFESSIONAL TURF FERTILIZER

MINI THERMO

6-0-12 + 5Mg

N total Controlled release nitrogen	6%
K₂O	12%
MgO	5%
CaO	15%

Sensationally Mini

Blend from two single components widely known in the world of greenkeeping (Sazolene and Polysulfate SGN 120), **MINI THERMO 6-0-12+ 5Mg** is an eclectic and specific fertilizer at the same time. The quality of the unique nitrogen fraction guarantee its controlled release, giving **homogeneous, healthy growth** without counterproductive vegetative peaks.

The **micro diameter** of the particles is the most desirable in the nutrition of particularly prestigious sports or recreational realities (rizomatous or stoloniferous herbaceous species), but once used also in "common contexts" MICRO TURF-ON 6-0-12 + 5Mg releases its entire balance with 12% in potassium oxide and 5% in magnesium oxide. At the end, 15% of calcium oxide to reach and support the potassium and magnesium intake, for a fertilizer that, properly calibrated in dosages and times, can effectively respond a large part of the nutritional needs of any grass surface.

Mini grain size

Controlled release nitrogen

Rich in potassium, magnesium and calcium
